Contents

Foreword *page* vii

Preface ix

1 Introduction **1**

2 What is a qubit? **5**
2.1 The polarization of light 5
2.2 Photon polarization 8
2.3 Mathematical formulation: the qubit 11
2.4 Principles of quantum mechanics 17
2.5 Quantum cryptography 23
2.6 Exercises 28
2.7 Further reading 32

3 Manipulating qubits **33**
3.1 The Bloch sphere, spin 1/2 33
3.2 Dynamical evolution 37
3.3 Manipulating qubits: Rabi oscillations 40
3.4 Principles of NMR and MRI 44
3.5 Exercises 47
3.6 Further reading 48

4 Quantum correlations **49**
4.1 Two-qubit states 49
4.2 The state operator (or density operator) 54
4.3 The quantum no-cloning theorem 57
4.4 Decoherence 58
4.5 The Bell inequalities 63

https://doi.org/10.1017/CBO9780511755361

4.6 Exercises 67
4.7 Further reading 72

5 Introduction to quantum computing 75
5.1 General remarks 75
5.2 Reversible calculation 77
5.3 Quantum logic gates 81
5.4 The Deutsch algorithm 84
5.5 Generalization to $n + m$ qubits 86
5.6 The Grover search algorithm 88
5.7 The quantum Fourier transform 91
5.8 The period of a function 94
5.9 Classical algorithms and quantum algorithms 101
5.10 Exercises 103
5.11 Further reading 105

6 Physical realizations 107
6.1 NMR as a quantum computer 108
6.2 Trapped ions 114
6.3 Superconducting qubits 122
6.4 Quantum dots 131
6.5 Exercises 133
6.6 Further reading 138

7 Quantum information 141
7.1 Teleportation 141
7.2 Shannon entropy 144
7.3 von Neumann entropy 147
7.4 Quantum error correction 154
7.5 Exercises 157
7.6 Further reading 158
